

PABLO BERRETTONI

DevOps Engineer & Full Stack Developer

Buenos Aires, Argentina | +54 011 6712-7405 | pabloberrettoni98@gmail.com

GitHub: github.com/PabloBerrettoni | LinkedIn: linkedin.com/in/pablo-berrettoni | Website: pabloberrettoni.com

PROFESSIONAL SUMMARY

DevOps Engineer with 4+ years of experience in cloud infrastructure, automation, and full-stack development. Experienced in GitOps methodologies, multi-cloud environments (AWS, GCP), and Infrastructure as Code — currently the sole DevOps owner of the entire GCP platform for a multi-tenant fintech/crypto company.

TECHNICAL SKILLS

Cloud: AWS, Google Cloud Platform (GKE, Cloud SQL, BigQuery, Datastream, Secret Manager, IAM), OCI

Infrastructure as Code: Terraform, Helm, Atlantis

Containers & Orchestration: Docker, Kubernetes (GKE), Gateway API

CI/CD & GitOps: ArgoCD, GitHub Actions, GitOps

Observability: Prometheus, Grafana, Loki, Tempo, Alloy, Grafana Faro, OpenTelemetry

Security: Cloud Armor WAF, Identity-Aware Proxy, Workload Identity Federation, reCAPTCHA Enterprise

Automation: Shell scripting, Ansible, Python

Development: MEVN Stack, LAMP Stack, Full Stack Development

PROFESSIONAL EXPERIENCE

DevOps Engineer

Eluter | Argentina - Hybrid | December 2025 - Present

- Sole DevOps engineer owning all cloud infrastructure on GCP for a multi-tenant fintech/crypto platform, supporting multiple white-label products across staging, production, and disaster-recovery environments.
- Migrated legacy cloud infrastructure to modern Infrastructure as Code, designing 25+ reusable Terraform modules covering networking, private GKE, Cloud SQL, IAM, WAF, and backups across environments.
- Implemented GitOps-based CI/CD with ArgoCD and GitHub Actions, including an ArgoCD ApplicationSet automatically deploying 15+ Helm charts across environments.
- Implemented keyless authentication end-to-end using Workload Identity Federation: GitHub Actions OIDC for CI and per-service Workload Identity with External Secrets Operator for secret distribution, eliminating long-lived credentials.
- Migrated applications from VM-based deployments to containerized workloads on private GKE clusters, using Gateway API, Certificate Manager wildcard TLS, Cloud Armor WAF, IAP, and reCAPTCHA Enterprise.
- Built the platform observability stack with Prometheus, Grafana, Loki, Tempo, OpenTelemetry, Alloy, and Grafana

Faro, including custom dashboards, alerting, and Slack notifications.

- Migrated databases from in-cluster PostgreSQL to private Cloud SQL and implemented CDC replication to BigQuery through Datastream for analytics and embedded Superset dashboards.
- Designed and executed a full disaster-recovery lifecycle test in a dedicated DR environment, recreating infrastructure from Terraform, deploying services through ArgoCD, validating data transfers, and measuring RTO with a documented runbook.

DevOps Engineer

PukaraIT | United Kingdom - Remote | October 2024 - August 2025

- Implemented GitOps-based infrastructure management using Terraform, ArgoCD, and Atlantis across AWS and GCP environments.
- Administered GCP environments running Google Kubernetes Engine (GKE) and AWS environments running Elastic Kubernetes Service (EKS).
- Managed client access controls, monitoring systems, and automated deployment processes across multiple cloud environments.
- Deployed and maintained applications using Helm while managing HashiCorp tooling and Terraform-based infrastructure.
- Designed disaster-recovery strategies with cross-account data replication and automated processing pipelines using AWS S3, Lambda, Step Functions, and AWS Backup.
- Developed modular Terraform architectures to automate infrastructure provisioning and create reusable cloud environments.
- Proactively designed and implemented infrastructure improvements to optimize client workflows and reduce operational overhead.

DevOps Engineer

EzzyNetworks | Spain - Remote | May 2023 - October 2024

- Managed server infrastructure and implemented secure password management systems across client environments.
- Deployed and maintained Apache Airflow on Kubernetes clusters to manage project workflows.
- Analyzed Kubernetes node capacity and optimized server proxy infrastructure for improved performance and reliability.
- Automated manual operational processes using Shell scripting, Ansible, and Python, reducing repetitive operational work.
- Established and maintained a mobile-device proxy infrastructure focused on network security and controlled access.

Full Stack Developer

PukaraIT | Spain - Remote | January 2022 - April 2023

- Developed and maintained applications across MEVN and LAMP technology stacks.
- Built, configured, and deployed Docker containers for application deployment and scaling.
- Provisioned and managed cloud infrastructure with Terraform for hosting web applications.

- Collaborated with cross-functional teams to deliver and deploy full-stack solutions.

PERSONAL PROJECTS

OCI Always Free Cloud Infrastructure

Terraform, GitHub Actions, OCI, Docker, Nginx, OpenVPN

- Architected and deployed a multi-node cloud platform on Oracle Cloud Infrastructure (OCI) completely within the Always Free tier using modular, tenant-agnostic Terraform code.
- Implemented automated CI/CD using GitHub Actions for terraform plan PR reviews and synchronized terraform apply executions with OCI Object Storage state locking.
- Provisioned networking (VCN, subnets, security lists), OCI managed DNS, containerized web services, OpenVPN, and Nginx reverse proxies with automated Let's Encrypt SSL/TLS certificates.

EDUCATION

Bachelor's Degree in Systems

National University of General Sarmiento (UNGS) | Buenos Aires, Argentina | 2020 - 2022

Full Stack Development Course

Digital House | Buenos Aires, Argentina | 2021

C1 Advanced English Certificate

British Cultural College | Buenos Aires, Argentina | 2020 - 2022

ADDITIONAL INFORMATION

Languages: Spanish (Native), English (C1 Advanced)
